

YEDITEPE UNIVERSITY
FACULTY OF ENGINEERING
UNDERGRADUATE PROGRAM OF BIOMEDICAL ENGINEERING
INFORMATION PACKAGE (2016)

GOALS

The goal of this program is to train expert engineers equipped with theoretical and practical knowledge and skills who deliver biomedical engineering services demanded in various areas of biomedical engineering especially at hospitals.

OBJECTIVES

Our main objective is the training of graduate engineers that contribute to the development of new biomedical devices for better diagnosis, treatment and follow-up of diseases, that follow the innovations in the health sector with the spirit of research, that ensure the flow of information by acting as a bridge between medicine and engineering fields and that make contribution to the new generation of biomedical engineers come after him.

PROGRAM OUTCOMES

Program outcomes of the undergraduate biomedical engineering program are as listed below:

- 1) Adequate knowledge in mathematics, science and engineering subjects pertaining to the relevant discipline; ability to use theoretical and applied information in these areas to model and solve engineering problems.
- 2) Ability to identify, formulate, and solve complex engineering problems; ability to select and apply proper analysis and modelling methods for this purpose.
- 3) Ability to design a complex system, process, device or product under realistic constraints and conditions, in such a way as to meet the desired result; ability to apply modern design methods for this purpose.
- 4) Ability to devise, select, and use modern techniques and tools needed for engineering practice; ability to employ information technologies effectively.
- 5) Ability to design and conduct experiments, gather data, analyze and interpret results for investigating engineering problems.
- 6) Ability to work efficiently in intra-disciplinary and multi-disciplinary teams; ability to work individually.
- 7) Ability to communicate effectively both orally and in writing; knowledge of a minimum of one foreign language.
- 8) Recognition of the need for lifelong learning; ability to access information, to follow developments in science and technology, and to continue to educate him/herself.

9) Awareness of professional and ethical responsibility.

10) Information about business life practices such as project management, risk management, and change management; awareness of entrepreneurship, innovation, and sustainable development.

TEACHING and LEARNING METHODS

Teaching - learning methods and strategies are selected so as to improve the student skills such as self-study, lifelong learning, observation, non-teaching, presentation, critical thinking, teamwork and benefiting from information efficiently. Education and teaching methods used in the program are as shown in the table below.

| Education and teaching method | Main Teaching Facilities | Tools Used |
|------------------------------------|--|--|
| Course | Listening and interpretation | Standard classroom technologies, multimedia tools, projector, computer, overhead projector |
| Course with Discussion | Listening and interpretation, observation, critical thinking, question development | Standard classroom technologies, multimedia tools, projector, computer, overhead projector |
| Brainstorming | Listening and interpretation, observation, critical thinking, question development, teamwork | Standard classroom technologies, multimedia tools, projector, computer, overhead projector |
| Presentation | Listening and interpretation, observation | Real or virtual environment allowing observations |
| Simulation | Listening and interpretation, observation, IT skills | Real or virtual environment allowing observations |
| Seminar | Research, life-long learning, writing, reading, IT, listening and interpretation, management skills | Standard classroom technologies, multimedia tools, projector, computer, overhead projector |
| Group Work | Research, life-long learning, writing, reading, IT, critical thinking, question development, management skills, teamwork | Internet databases, library databases, e-mail, online chat, Web-based discussion forums |
| Experiment | Observation / condition processing, IT, managerial skills, teamwork | Dedicated hardware |
| Homework | Research, life-long learning, writing, reading, IT | Internet databases, library databases, e-mail, |
| Invited Speaker | Listening and interpretation, Observation / condition processing | Standard classroom technologies, multimedia tools, projector, computer, overhead projector |
| Student Club Activities / Projects | Observation / condition processing, critical thinking, question development, teamwork, research - life-long learning, writing, reading, management skills, pre-planned special skills. | |

COURSE STRUCTURE and ECTS CREDITS

The course structure offered by the program and the ECTS credits of these courses are as seen in the table below.

| 1st Semester | | | ECTS |
|----------------------------|-----|--|-----------|
| BME | 102 | Introduction to Biomedical Engineering | 2 |
| AFE | 131 | Academic English I | 4 |
| CHEM | 101 | General Chemistry | 6 |
| ES | 161 | Engineering Drawing | 5 |
| MAH | 131 | Calculus I | 6 |
| PHYS | 101 | Physics I | 6 |
| Semester ECTS Total | | | 29 |

| 2nd Semester | | | ECTS |
|----------------------------|-----|-----------------------------------|-----------|
| AFE | 132 | Academic English II | 4 |
| ES | 112 | Algorithms & Computer Programming | 6 |
| MATH | 132 | Calculus II | 6 |
| MATH | 221 | Linear Algebra | 6 |
| PHYS | 102 | Physics II | 6 |
| HUM | 103 | Humanities | 3 |
| Semester ECTS Total | | | 31 |

| 3rd Semester | | | ECTS |
|----------------------------|-----|-----------------------------------|-----------|
| BME | 211 | Biological and Medical Physics | 11 |
| BME | 213 | Biology in Biomedical Engineering | 6 |
| CHBE | 203 | Organic Chemistry | 5 |
| MATH | 241 | Differential Equations | 6 |
| TKL | 201 | Turkish Language I | 2 |
| Semester ECTS Total | | | 30 |

| 4th Semester | | | ECTS |
|----------------------------|-----|---|-----------|
| BME | 214 | Electrical Circuits in Biomedical Eng. | 5 |
| BME | 222 | Electromagnetic Fields and Waves in BME | 6 |
| BME | 252 | Biomechanics | 6 |
| BME | 262 | Biomaterials | 6 |
| FE | XX1 | Free Elective I | 5 |
| TKL | 202 | Turkish Language II | 2 |
| Semester ECTS Total | | | 30 |

| 5th Semester | | | ECTS |
|----------------------------|-----|--|-----------|
| BME | 301 | Biomedical Electronics I | 6 |
| BME | 313 | Human Physiology | 5 |
| BME | 351 | Modelling and Control of Biomedical Sys. | 6 |
| ES | 224 | Signals and Systems | 5 |
| ES | 272 | Numerical Analysis | 6 |
| HTR | 301 | History of Turkish Revolution I | 2 |
| Semester ECTS Total | | | 30 |

| 6th Semester | | | ECTS |
|----------------------------|-----|------------------------------------|-----------|
| BME | 302 | Biomedical Electronics II | 8 |
| BME | 314 | Biomedical Instrumentation | 8 |
| BME | 324 | Biomedical Sensors and Transducers | 7 |
| BME | XX1 | Restricted Elective I | 5 |
| HTR | 302 | History of Turkish Revolution II | 2 |
| Semester ECTS Total | | | 30 |

| 7th Semester | | | ECTS |
|----------------------------|-----|---|-----------|
| BME | 421 | Medical Imaging | 9 |
| BME | 441 | Microprocessors & Microcontrollers in BME | 8 |
| BME | XX2 | Restricted Elective II | 5 |
| BME | XX3 | Restricted Elective III | 5 |
| ES | 301 | Engineering Management | 4 |
| BME | 400 | Summer Practice | 1 |
| Semester ECTS Total | | | 32 |

| 8th Semester | | | ECTS |
|----------------------------|-----|------------------------|-----------|
| BME | 492 | Engineering Project | 8 |
| BME | XX4 | Restricted Elective IV | 5 |
| BME | XX5 | Restricted Elective V | 5 |
| BME | XX6 | Restricted Elective VI | 5 |
| FE | XX2 | Free Elective II | 5 |
| Semester ECTS Total | | | 28 |

COURSE - PROGRAM LEARNING OUTCOMES

The relation between the courses offered by the program and the program learning outcomes are as listed in the following table.

| Course | PLO 1 | PLO 2 | PLO 3 | PLO 4 | PLO 5 | PLO 6 | PLO 7 | PLO 8 | PLO 9 | PLO 10 |
|--|-------|-------|-------|-------|-------|-------|-------|-------|-------|--------|
| Introduction to Biomedical Engineering | | | | X | | X | X | X | X | X |
| Biological and Medical Physics | X | X | X | X | X | X | | | | |
| Electrical Circuits in Biomedical Engineering | X | X | X | X | X | | | X | X | X |
| Electromagnetic Fields and Waves in BME | X | X | X | X | | | | | | |
| Biomechanics | X | X | X | X | X | X | X | X | X | X |
| Biomaterials | X | X | | X | | X | X | X | X | |
| Biomedical Electronics I | X | X | X | X | X | X | | X | | |
| Human Physiology | X | X | X | X | X | X | | | | |

COURSE CATEGORIES

Courses offered by the program are as categorized below:

| Support Courses | ECTS |
|-----------------------------------|-------------|
| Biology in Biomedical Engineering | 6 |
| Calculus I | 6 |
| Calculus II | 6 |
| Differential Equations | 6 |
| Academic English I | 4 |
| Academic English II | 4 |
| General Chemistry | 6 |
| Linear Algebra | 6 |
| Organic Chemistry | 5 |
| Physics I | 6 |
| Physics II | 6 |
| ECTS Total | 61 |

| Basic Vocational Courses | ECTS |
|-----------------------------------|-------------|
| Algorithms & Computer Programming | 6 |
| Engineering Drawing | 5 |
| Numerical Analysis | 6 |
| Signals and Systems | 5 |
| ECTS Total | 22 |

| Social-Economics-Administration Courses | ECTS |
|--|-------------|
| Engineering Management | 4 |
| History of Turkish Revolution I | 2 |
| History of Turkish Revolution II | 2 |
| Humanities | 3 |
| Turkish Language I | 2 |
| Turkish Language II | 2 |
| Free Elective I (course confirmed by the department) | 5 |
| Free Elective II (course confirmed by the department) | 5 |
| ECTS Total | 25 |

| Expertise / Field Courses | ECTS |
|---|-------------|
| Biological and Medical Physics | 11 |
| Biomaterials | 6 |
| Biomechanics | 6 |
| Biomedical Electronics I | 6 |
| Biomedical Electronics II | 8 |
| Biomedical Instrumentation | 8 |
| Biomedical Sensors and Transducers | 7 |
| Electrical Circuits in Biomedical Engineering | 5 |
| Electromagnetic Fields and Waves in BME | 6 |
| Engineering Project | 8 |
| Human Physiology | 5 |
| Introduction to Biomedical Engineering | 2 |
| Microprocessors and Microcontrollers in BME | 8 |
| Modelling and Control of Biomedical Sys. | 6 |
| Medical Imaging | 9 |
| Summer Practice | 1 |
| ECTS Total | 102 |

| Restricted Electives | ECTS |
|--|-------------|
| Artificial Intelligence in Medicine | 5 |
| Biological Transport Systems | 5 |
| Biometry For Analytical Reasoning &Modelling | 5 |
| Magnetic Resonance Imaging | 5 |
| Magnetic Resonance Spectroscopic Imaging | 5 |
| Medical Robotics | 5 |
| Orthopedic Cements for Hard Tissue Repair | 5 |
| ECTS Total (any six) | 30 |

LEVEL OF QUALIFICATION

This program is a first cycle (undergraduate) programme of 240 ECTS credits in the area of Biomedical Engineering. Students who complete the program successfully and acquire the program competencies receive an undergraduate degree in the area of Biomedical Engineering.

ADMISSIN REQUIREMENTS

In line with the academic and legal procedures of the university, the students who apply for admission into the program should follow the process governed by ÖSYM and succeed in the university entrance examination. Students who have started an equivalent programme in Turkey or abroad may apply for transfer to the program. Application of the student is evaluated before the semester starts considering the credentials of the student and the degree for which s/he is applying. Detailed information regarding admission to the university is available in the university catalogue.

Students, who come to the university from abroad through exchange programmes whose conditions have been drawn by an agreement and approved by the university, may take the courses offered in the programme. To take a course, the student should demonstrate that s/he has completed its prerequisite courses or their equivalents. All courses in the programme curriculum are conducted in English.

OCCUPATIONAL PROFILES

Our graduates are employed in a variety of sectors including minister of health and private companies in healthcare. Meanwhile, many of our graduates continue their education at the graduate level and receive Masters and Doctorate degrees in the area of Biomedical Engineering and related fields.

GRADUATION REQUIREMENTS

In order to graduate from the programme, a student is required complete a total of 48 courses including 41 compulsory, 1 free elective and 6 restricted elective courses to receive a total of 146 credits and 240 ECTS and obtain a CGPA of at least 2.00/4.00. Among the courses in the curriculum, “BME492 Engineering Project” allows the student to apply the knowledge they have acquired during the program to a real-life engineering project. Moreover, each student is required to work as an intern for an institution that has been approved by the department for a total of 20 working days. This compulsory internship is with the course “BME400 Summer Practice”.

PROGRAM Director and ECTS COORDINATOR

PROGRAM Director:

Assist. Prof. Dr. Gökhan ERTAŞ

Department of Biomedical Engineering

POLLS APPLIED TO STUDENTS

The polls applied to students are presented below.

T.C. YEDİTEPE ÜNİVERSİTESİ
Mühendislik ve Mimarlık Fakültesi

Ders Çıktı Değerlendirme Anketi

Please use the following scale to rate how the outcomes are served by this course:

(Note to the instructor: If an outcome is not served by this course, please ask your students to rate it as "NA" before filling out the rest of the evaluation).

NA: Not Applicable (does not serve)

1. Very little 2. Little 3. Moderately 4. Well 5. Very well

Lütfen aşağıdaki puanlama sistemini kullanarak bu dersin çıktılara nasıl hizmet verdiğini değerlendiriniz:

(Öğretim üyesine not: Öğrencilerinizin anketin geri kalanını değerlendirmeden önce dersinizin hizmet vermediği çıktıları "ID" şeklinde işaretlemelerini sağlayınız).

ID: İlgili değil (hizmet vermiyor)

1. Çok az 2. Az 3. Orta 4. İyi 5. Çok iyi

|---|---|--------------|---|---|---|---|
| No | Program Learning Outcomes | Contribution | | | | |
| | | 1 | 2 | 3 | 4 | 5 |
| 1 | Adequate knowledge in mathematics, science and engineering subjects pertaining to the relevant discipline; ability to use theoretical and applied information in these areas to model and solve engineering problems. | | | | | X |
| 2 | Ability to identify, formulate, and solve complex engineering problems; ability to select and apply proper analysis and modelling methods for this purpose. | | | | X | |
| 3 | Ability to design a complex system, process, device or product under realistic constraints and conditions, in such a way as to meet the desired result; ability to apply modern design methods for this purpose. | | | | | X |
| 4 | Ability to devise, select, and use modern techniques and tools needed for engineering practice; ability to employ information technologies effectively. | | | X | | |
| 5 | Ability to design and conduct experiments, gather data, analyze and interpret results for investigating engineering problems. | | X | | | |
| 6 | Ability to work efficiently in intra-disciplinary and multi-disciplinary teams; ability to work individually. | | | | | X |
| 7 | Ability to communicate effectively both orally and in writing; knowledge of a minimum of one foreign language. | | | | | |
| 8 | Recognition of the need for lifelong learning; ability to access information, to follow developments in science and technology, and to continue to educate him/herself. | | | | | |
| 9 | Awareness of professional and ethical responsibility. | | | | | |
| 10 | Information about business life practices such as project management, risk management, and change management; awareness of entrepreneurship, innovation, and sustainable development. | | | | | |

| Goals | To ensure that students gain knowledge about basic biology of cells and improve practical experience with experimental approaches |
| Content | Introduction to biology from the biomedical engineering perspective, carbon cycle and polymer principles, cellular elements, cell membrane structure, metabolism and modelling approaches, cellular respiration, the cell cycle, meiosis and sexual life cycles, the molecular basis of inheritance, from gene to protein, regulation of gene expression, protein and gene drug delivery, genomics, proteomics, metabolics, information technologies, dna arrays, virtual laboratory applications, simulational software in computational biology. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|--|------------------|------------------|--------------------|
| 1) Understands the basic concepts of cell structure and functions. | 1 | 1,2 | A,C |
| 2) Observes and interpret different cell types and internal structures using a light microscope. | 1,3 | 1,2,3 | A,B,C |
| 3) Correctly uses life sciences laboratory equipment and interpret the results. | 1,3 | 1,2,3 | A,B,C |
| 4) Explains and evaluates the isolation and analysis of DNA using molecular biology techniques. | 1,3 | 1,2,3 | A,B,C |

| Goals | The aim of this course is to introduce the students the fundamentals of electrical and magnetic fields, electromagnetic waves and magnetic properties of materials. |
| Content | Electrostatics, Electric Field, Gauss' Law, Conductors, Dielectrics, Magnetostatics, Magnetic Forces, The Biot-Savart Law, Ampere's Law, Magnetic Properties of Materials, Maxwell's Equations, Faraday's Law, Displacement Current, Electromagnetic Waves, Time- Harmonic Fields, Plane Waves in Lossless Media, Waves in Lossy Media. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|--|------------------|------------------|--------------------|
| 10) Adequate knowledge in electrical and magnetic fields. | 1 | 1,2,3 | A,C |
| 11) Ability to use laws describing the fields and waves. | 1, 2 | 1,2,3 | A,C |
| 12) Ability to explain propagation of electromagnetic waves. | 1, 2 | 1,2,3 | A,C |
| 13) Familiarity with the electromagnetics application in medical devices | 1,2,3,4 | 1,2,3 | A,C |

| | |

| |
|-----------------------|
| COURSE CONTENT |
|-----------------------|

| Week | Topics | Study Materials |
|-------------|---|--------------------------------------|
| 1 | Introduction to Electromagnetic Theory and its necessity for engineering. Basic Vector Algebra and Vector Calculus. | Electromagnetic Theory |
| 2 | Electrostatics: Coulomb's Law and Electric Field Intensity. | Electromagnetic Theory |
| 3 | Gauss's Law and Applications, Electric Flux Density. | Electromagnetic Theory |
| 4 | Conductors and Dielectrics in Static Electric Fields. Capacitance and Capacitors. | Static Electric Fields |
| 5 | Steady Currents: Current Density and Ohm's Law. | Steady Currents |
| 6 | Electromotive Force and Kirchhoff's Voltage Law. Equation of Continuity and Kirchhoff's Current Law | Kirchhoff's Voltage and Current Laws |
| 7 | MIDTERM I | - |
| 8 | Power Dissipation and Joule's Law. Resistance Calculations. | Joule's Law |
| 9 | Magnetostatics: Fundamental Postulates of Magnetostatics. | Magnetostatics |
| 10 | The Biot – Savart Law and Applications. Magnetic Field Intensity. | Magnetostatics |
| 11 | Magnetic Circuits. Inductances and Inductors | Magnetic Circuits |
| 12 | Time – Varying Fields and Maxwell's Equations | Maxwell's Equations |
| 13 | The Uniform Plane Waves | Plane Waves |
| 14 | Biomedical Applications | - |

| Goals | The aim of this course is to introduce students the engineering mechanics as applied to human muscle-skeletal system. |
| Content | Application techniques of engineering mechanics to human muscle-skeletal systems. Mechanical properties of tissues. Structural properties and mechanical analysis of bones, muscles and joints. Dynamics of mechanical systems. Investigation of orthopedic materials through mechanical procedures, stress and strain applications of implantation materials. Description of basic research areas related to biomechanics and problems. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|---|------------------|------------------|--------------------|
| 14) Adequate knowledge in mechanics of human muscle-skeletal system. | 1,2,3,4,5 | 1,2,3 | A,C |
| 15) Adequate knowledge in structural properties and mechanical analysis of bones, muscles and joints. | 1,2,3 | 1,2,3 | A,C |
| 16) Ability to distinguish orthopedic materials. | 4 | 1,2,3 | A,C |
| 17) Awareness of basic research areas related to biomechanics and problems. | 5,6,7,8,9,10 | 1,2,3 | A,C |

| Week | Topics | Study Materials |
| 1 | Anatomy and "medical speak" | Textbook |
| 2 | The nature of vector quantities, combining and resolving two-dimensional vectors. | Textbook |
| 3 | Basic terms involved in kinematics (e.g. velocity, acceleration, etc.) | Textbook |
| 4 | Kinematic relationships between linear and angular motion | Textbook |
| 5 | Concepts of kinematics to analyze human motion | Textbook |
| 6 | Midterm I | |
| 7 | Basic terms involved in the kinetics of linear motion (e.g. force, inertia, momentum, etc.) | Textbook |
| 8 | Important characteristics of forces (e.g. magnitude, direction, point of application, components) | Textbook |
| 9 | Newton's laws of motion and relation to biomechanical analysis | Textbook |
| 10 | The significance of the impulse-momentum, work-energy and conservation of momentum relationships to sports activities | Textbook |
| 11 | Basic terms involved in the kinetics of angular motion (e.g. angular momentum, moment of inertia, torque) | Textbook |
| 12 | Kinetic relationship | Textbook |
| 13 | Midterm II | |
| 14 | Mechanics of biomaterials; stress, shear, bending, torsion, toughness, fatigue, viscoelasticity, wear, corrosion. | Textbook |

| Goals | The aim of this course is to introduce students the fundamentals of material sciences as applied to medicine. |
| Content | Material science and relation with medicine. Properties of crystal and non-crystal materials. Natural biological materials. Artificial biologic materials. Applications of material science in orthopedic surgery. Mechanics, corrosive and surface properties, tissue reactions of polymers, ceramics, bioglass, medical-grade titanium synthetics and other materials. Cardiology and material science. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|---|------------------|------------------|--------------------|
| 18) Adequate knowledge in crystal and non-crystal materials. | 1,2,4 | 1,2,3 | A,C |
| 19) Ability to distinguish natural and artificial biological materials. | 1,2,4,8,9 | 1,2,3 | A,C |
| 20) Adequate knowledge in material science as applied to medicine. | 1,2,4,8,9 | 1,2,3 | A,C |
| 21) Ability to present a specific subject to an audience. | 1,2,4,6,7,8 | 1,2,3 | C |

| | |
|----------------------------|--|
| Teaching Methods: | 1: Lecture, 2: Question-Answer, 3: Discussion, 9: Simulation, 12: Case Study |
| Assessment Methods: | A: Testing, B: Experiment, C: Homework |

| COURSE CONTENT | | |
|-----------------------|--|------------------------|
| Week | Topics | Study Materials |
| 1 | Introduction to Biomaterials | Textbook |
| 2 | Introduction to Hard Tissues | Textbook |
| 3 | Hard Tissue Replacements, introduction to mechanics of materials | Textbook |
| 4 | Hard Tissue Replacements, mechanical testing of materials | Textbook |
| 5 | Compressive, Tensile, Torsional and Flexural Testing of Materials Introduction to the Cardiovascular System | Textbook |
| 6 | Cardiovascular Replacements | Textbook |
| 7 | MIDTERM | |
| 8 | Soft Tissue Replacements | Textbook |
| 9 | Soft Tissue Replacements, HCF and LCF Fatigue Testing | Textbook |
| 10 | Metallic Materials, Corrosion of Materials | Textbook |
| 11 | Polymeric Materials, Viscoelasticity | Textbook |
| 12 | Ceramic Materials, Degradation of Ceramic Materials | Textbook |
| 13 | Composite Materials, Medical Standards and Ethics, Student Presentations | Textbook |
| 14 | Student Presentations | |

| Goals | The aim of this course is to introduce students the fundamentals of electronics as applied to biomedical instruments. |
| Content | Fundamental solid-state principles, doping, PN Junction, bias. Diode models and applications, load-line analysis, AND/OR gates, rectifiers and voltage multipliers, clippers clampers and Zener voltage regulators. Bipolar junction transistors (BJT), PNP and NPN types, characteristics, common-emitter, common- base and common-collector configurations, basic biasing circuits and applications. JFET and MOSFET transistors and applications. Noise and circuit analysis and design of circuits with JFET, bipolar Transistor and MOSFET Combination. BJT,FET,MOS networks used at the input of EEG, ECG, EMG instruments in the medical field applications. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|--|------------------|------------------|--------------------|
| 22) Adequate knowledge in diodes, their models and applications. | 1,2,5 | 1,2,3 | A,B,C |
| 23) Adequate knowledge in the working principles of transistors. | 1,2,5 | 1,2,3 | A,B,C |
| 24) Ability to analyze and implement transistor networks. | 1,2,3,4,5 | 1,2,3 | A,B,C |
| 25) Ability to use computer software to design diodes and transistors. | 2,4,5 | 1,2,3,9 | A,B,C |
| 26) Ability to devise, select, use diodes and transistors in biomedical instruments. | 3,4,6,8 | 1,2,3,12 | A,B,C |

| Goals | The aim of this course is to introduce students the advanced electronics as applied to biomedical instruments. |
| Content | Power amplifiers of A, B, C class, high and low frequency responses of amplifiers (BJT, FET and MOSFET), operational amplifiers, instrumentation amplifiers, active filters with operational amplifiers and its frequency responses, designs which can be used at the output of EEG, EMG, ECG. Oscillators and voltage regulators. Logic circuits and digital circuit design applied in the instruments such as EEG, EMG, ECG, patient stimulator and pacemakers in the medical field applications. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|---|------------------|------------------|--------------------|
| 27) Adequate knowledge in analysis of circuits with operational amplifiers. Ability to devise, select and use operational amplifiers in biomedical instruments. | 1,2,3,4,5 | 1,2,3 | A,B,C |
| 28) Adequate knowledge in working principles of power amplifiers. | 1,2,3,4,5 | 1,2,3 | A,B,C |
| 29) Adequate knowledge in high and low frequency responses of transistors and their use in signal amplifiers. | 1,2,3,4,5 | 1,2,3 | A,B,C |
| 30) Adequate knowledge in working principles of oscillators. Ability to use and design voltage regulators. | 1,2,3,4,5 | 1,2,3 | A,B,C |

| | | | |
|--|-----------|-------|-------|
| 31) Adequate knowledge in logic circuits and their design using diodes, transistors and integrated circuits. | 1,2,3,4,5 | 1,2,3 | A,B,C |
| 32) Familiarity with the implementation of advanced electronics to biomedical instruments. | 6, 8 | 1,2,3 | A |

| | |

| Goals | The aim of this course is to introduce students the concepts of medical instrumentation for physiological measurements. |
| Content | Basic concepts of medical instrumentation. Principles of electrodes and transducers. Biopotential electrodes. Biopotential amplifiers. Electrocardiography. Basic principles related to physiological pressure measurements and phonocardiography. Measurement techniques of blood flow and volume of blood flow. Other cardiovascular measurements. Therapeutic and prosthetic devices, defibrillators, pacemakers, heart-lung pumps. Instrumentation for measuring brain functions, EEG and EMG Measurements. Human respiratory system and its measurements, respiratory therapy equipment. Intensive and coronary-care units. Operating rooms and electro-surgery systems. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|--|------------------|------------------|--------------------|
| 37) Adequate knowledge in basic concepts of medical instrumentation. | 1,2,3,6 | 1,2,3 | A,B,C |
| 38) Adequate knowledge in the working principles of electrodes, transducers and biopotential amplifiers. | 1,2,3,4,5,6 | 1,2,3 | A,B,C |
| 39) Ability to use, design and develop instrument for physiological measurements from human body. | 3,4,5,6,9 | 1,2,3 | A,B,C,E |
| 40) Adequate knowledge in biomedical instruments at intensive and coronary-care units and operating rooms. | 4,6,7,8,9 | 1,2,3 | A,B,C |

| | | 1 | 2 | 3 | 4 | 5 |
| 1 | Adequate knowledge in mathematics, science and engineering subjects pertaining to the relevant discipline; ability to use theoretical and applied information in these areas to model and solve engineering problems. | | | X | | |
| 2 | Ability to identify, formulate, and solve complex engineering problems; ability to select and apply proper analysis and modelling methods for this purpose. | X | | | | |
| 3 | Ability to design a complex system, process, device or product under realistic constraints and conditions, in such a way as to meet the desired result; ability to apply modern design methods for this purpose. | | | | | X |
| 4 | Ability to devise, select, and use modern techniques and tools needed for engineering practice; ability to employ information technologies effectively. | | | | | X |
| 5 | Ability to design and conduct experiments, gather data, analyze and interpret results for investigating engineering problems. | | | X | | |
| 6 | Ability to work efficiently in intra-disciplinary and multi-disciplinary teams; ability to work individually. | | | | | X |
| 7 | Ability to communicate effectively both orally and in writing; knowledge of a minimum of one foreign language. | X | | | | |
| 8 | Recognition of the need for lifelong learning; ability to access information, to follow developments in science and technology, and to continue to educate him/herself. | | | X | | |
| 9 | Awareness of professional and ethical responsibility. | | | | | X |
| 10 | Information about business life practices such as project management, risk management, and change management; awareness of entrepreneurship, | | | | | |

innovation, and sustainable development.

| | |
|--------------------------------|--|
| Language of Instruction | English |
| Course Level | Bachelor's Degree (First Cycle Programmes) |
| Course Type | Compulsory |
| Course Coordinator | - |
| Instructors | Assist.Prof.Dr. Gökhan ERTAŞ |
| Assistants | - |
| Goals | The aim of this course is to introduce students the concepts of medical instrumentation for physiological measurements. |
| Content | The properties of transducers, dynamic linearity, hysteresis and frequency range. The basis of biosensor design, analysis and selection of physical, optical, electrical, mechanical, thermal transduction mechanisms. Biological elements, immobilization of biological components. Medical, biological and chemical sensors and transducers based on electrochemistry, optics, and solid- state devices. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|---|------------------|------------------|--------------------|
| 41) Awareness of the concepts of transducer, sensor and actuator. Adequate knowledge in instrument model. | 1 | 1,2,3 | A, C |
| 42) Ability to distinguish the characteristics of sensors and transducers. | 1,2,3,8 | 1,2,3 | A, C |
| 43) Adequate knowledge in measurement principles, error and accuracy. | 1,2,3 | 1,2,3 | A, C |
| 44) Adequate knowledge in the theory and the practical biomedical use of displacement sensors, temperature sensors and electromagnetic radiation sensors. | 1,2,3,4,5,6 | 1,2,3 | A, C |
| 45) Adequate knowledge in modelling and working of | 1,2,3,4,5,6 | 1,2,3 | A, C |

| | | | |
|---|---------------|-------|------|
| biological and chemical sensors. | | | |
| 46) Adequate knowledge in biosensor design. | 1,2,3,4,5,6,8 | 1,2,3 | A, C |

| | |
|----------------------------|--|
| Teaching Methods: | 1: Lecture, 2: Question-Answer, 3: Discussion, 9: Simulation, 12: Case Study |
| Assessment Methods: | A: Testing, B: Experiment, C: Homework |

| COURSE CONTENT | | |
|-----------------------|---|---|
| Week | Topics | Study Materials |
| 1 | Transducers, sensors and actuators. | Instrumentation and measurement. |
| 2 | Instrument Model. | Instrumentation and measurement. |
| 3 | Classification of sensors and transducers. | Sensor technologies. |
| 4 | Characteristics of sensors and transducers. | Sensor technologies. |
| 5 | Principles of measurement. Error. Accuracy. | Instrument types and performance characteristics. |
| 6 | Displacement sensors: Resistive and capacitive. | Measurement sensors and instruments. |
| 7 | Displacement sensors: Resistive and capacitive. Wheatstone Bridge. | Measurement sensors and instruments. |
| 8 | MIDTERM | |
| 9 | Displacement sensors: Inductive and piezoelectric. | Measurement sensors and instruments. |
| 10 | Displacement sensors: Inductive and piezoelectric. | Measurement sensors and instruments. |
| 11 | Temperature sensors: Thermistors and thermocouples. | Temperature measurement. |
| 12 | Electromagnetic radiation sensors: Thermal and photon detectors. | Electromagnetic radiation measurement. |
| 13 | Biological and chemical sensors. | Sensor technologies. |
| 14 | The basis of biosensor design. Analysis and selection of transduction mechanisms. Linearization of sensor characteristics | Biosensors. |

| Goals | The aim of this course is to introduce students the concepts of human physiology and mechanisms of physiological control. |
| Content | Mathematical modelling and simulation of physiological systems. Laplace transform and state-space representation. Time and frequency domain analysis. Stability of linear systems. PID control applications. Parametric identification and optimal control of physiological systems. Application of control techniques to Cheyne-Stokes breathing, glucose regulation, cardiovascular and human muscle-reflex systems. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |

| Language of Instruction | Turkish. report to be written in English. |
| Course Level | Bachelor's Degree (First Cycle Programmes) |
| Course Type | Compulsory summer practice |
| Course Coordinator | |
| Instructors | Assist.Prof.Dr. Gökhan ERTAŞ |
| Assistants | |
| Goals | The aim of summer practice is to let students observe and experience the engineering world outside the university, get a glimpse of the practical aspects of engineering, observe how the knowledge at school and the engineering practice outside are related and decide what they would like to do after they graduate and, perhaps, decide about their elective courses according to that. |
| Content | Compulsory summer internship for a minimum of 20 business days. Internships cannot coincide with academic semesters. Students are required to undertake an internship prior to or in the middle of their fourth year of education, if time permits, and to register to this course in the semester following the completion of their internship. Their written report is evaluated and graded within this course. |

| Course Learning Outcomes | Program Learning Outcomes | Teaching Methods | Assessment Methods |
|--|---------------------------|-----------------------|--------------------|
| 1) Ability to convey in writing what they observed, did and experienced during their summer practice. | 8, 9 | From previous courses | D |
| 2) A practical experience with a chance to observe what mechanical engineering involves in a practical environment, how such environments are organized and run. | 7, 11, 12 | 8 | D |

| Goals | This course will provide insight into the medical imaging modalities that are routinely used to diagnose several diseases including cancer using advanced data acquisition, reconstruction and visualization methods. |
| Content | The main contents of the course will be the data acquisition principles and reconstruction methods of X-ray radiography, mammography, fluoroscopy, computed tomography (CT), ultrasound, magnetic resonance imaging (MRI), nuclear planar imaging, single photon emission computed tomography (SPECT) and positron emission tomography (PET). The parameters that would control the image quality, spatial resolution, contrast resolution, and radiation dose (in relevant modalities) will be discussed for all of these medical imaging modalities. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|--|------------------|------------------|--------------------|
| 66) Medical imaging modalities (data acquisition, reconstruction, image quality, spatial resolution, contrast resolution, noise characteristics) | 1,2,4 | 1,2,3 | A,C |

| Goals | Biostatistics is an important component of writing a complete research article and delivering the significance of results to an audience. This course will provide insight into the various statistical tests and discuss the most appropriate test choices for a set of problems including the multiple comparisons, correlations and the survival analysis. The main question we will seek an answer for in this course will be, ' <i>How are the biostatistical methods utilized in biosciences to define the impact of new methodologies and what is the most appropriate statistical test to prove this significance?</i> ' |
| Content | Numerical data sampling in biomedical applications, measures of central tendency and dispersion in biomedical data, interval, nominal and ordinal quantification and estimation, Gaussian models in biomedical engineering, hypothesis testing, unpaired and paired t-test, analysis of variance, repeated measures analysis of variance, linear regression models, product-moment correlation analysis, Bland-Altman test, Spearman rank correlation models, Chi-square analysis of contingency tables, McNemar's analysis, Cochran Q, Mann-Whitney rank sum test, Kruskal Wallis statistic, Wilcoxon signed rank test, Friedman statistical analysis for small biomedical data, Survival analysis, Log-rank test, and Gehan's modeling of survival data. |

| COURSE'S CONTRIBUTION TO PROGRAM | | | | | | |
|---|---|--------------|---|---|---|---|
| No | Program Learning Outcomes | Contribution | | | | |
| | | 1 | 2 | 3 | 4 | 5 |
| 1 | Adequate knowledge in mathematics, science and engineering subjects pertaining to the relevant discipline; ability to use theoretical and applied information in these areas to model and solve engineering problems. | | | | | X |
| 2 | Ability to identify, formulate, and solve complex engineering problems; ability to select and apply proper analysis and modelling methods for this purpose. | | | | | X |
| 3 | Ability to design a complex system, process, device or product under realistic constraints and conditions, in such a way as to meet the desired result; ability to apply modern design methods for this purpose. | | | | X | |
| 4 | Ability to devise, select, and use modern techniques and tools needed for engineering practice; ability to employ information technologies effectively. | | | X | | |
| 5 | Ability to design and conduct experiments, gather data, analyze and interpret results for investigating engineering problems. | | | | | X |
| 6 | Ability to work efficiently in intra-disciplinary and multi-disciplinary teams; ability to work individually. | | | X | | |
| 7 | Ability to communicate effectively both orally and in writing; knowledge of a minimum of one foreign language. | | | | | |
| 8 | Recognition of the need for lifelong learning; ability to access information, to follow developments in science and technology, and to continue to educate him/herself. | | | | | X |
| 9 | Awareness of professional and ethical responsibility. | | | | | |
| 10 | Information about business life practices such as project management, risk management, and change management; awareness of entrepreneurship, innovation, and sustainable development. | | | | | |

| Goals | The aim of this course is to gain students the fundamentals of artificial intelligence and its implementation in the field of medicine. |
| Content | Introduction to artificial intelligence (AI). AI-based clinical decision making. AI in medical diagnosis, therapy selection and monitoring. Reasoning with clinical knowledge. Machine learning systems. Clinical Decision Support Systems. Medical Applications of AI. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|--|------------------|------------------|--------------------|
| 80) Adequate knowledge in artificial intelligence and artificial intelligence based clinical decision making. | 1,2,3,4,5 | 1,2,3 | A,C |
| 81) Adequate knowledge in machine learning systems and clinical decision support systems. | 2,3,4,5,6,8 | 1,2,3 | A,C |
| 82) Ability to use theoretical and applied information to understand the applications of artificial in medicine. | 4,6,7,8,9 | 1,2,3 | A, E |

| | |

| Assistants | - |
| Goals | <p>Magnetic resonance imaging (MRI) provides non-invasive information about the body's anatomy, structure, and even metabolism through its detection of signals coming from water, lipid, macromolecules, and micromolecules. It has been widely used in the clinical settings for cancer localization and characterization in various parts of the body, as well as detection of structural anomalies.</p> <p>The main question we will seek an answer for in this course will be, 'How is the MR imaging technology utilized in the clinical environments for the visualization of the human anatomy, the localization and assessment of several diseases, and even the understanding of the cancer dynamics?'</p> |
| Content | This course will provide insight into what the magnetic resonance (MR) phenomenon is, as well as how the magnetic resonance images are created through the in depth understanding of MR hardware system parts, MR signal formation, localization, image reconstruction, 2D and 3D MR imaging, fast MRI, and MR clinical application to the understanding of several disease characteristics. |

| Learning Outcomes | Program Outcomes | Teaching Methods | Assessment Methods |
|---|------------------|------------------|--------------------|
| 83) MR imaging principles, MR physics | 1,2,4 | 1,2,3 | A,C |
| 84) MR imaging data acquisition (MR magnet, gradients, RF coils) and reconstruction | 1,2,4 | 1,2,3 | A,C |
| 85) Relaxation and image contrast | 1,2,4 | 1,2,3 | A,C |
| 86) 2D imaging, 3D imaging, Fast imaging | 1,2,4 | 1,2,3 | A,C |

| | | | |
|---|-----------|-------|------|
| 87) Solving MR signal equations for different data acquisition schemes (Spin echo, gradient echo, inversion recovery, saturation recovery, excitation recovery) | 1,2,4 | 1,2,3 | A,C |
| 88) Solving homework questions | 1,2,4,6 | 1,2,3 | C |
| 89) Ethical responsibilities of biomedical engineers in healthcare | 9 | 1,2,3 | A |
| 90) Importance of MR imaging in healthcare and clinical applications | 9 | 1,2,3 | A,C |
| 91) Project selection and presentation | 4,6,7,8,9 | 1,2,3 | A, D |

| | |
